                                                                                                                                                                                   The Salk, Stanford, PGEC (SSP) Consortium members constructed and sequenced the pUNI (ORF) clones using the RAFL cDNAs: Yamada, K., Banh, J., Chan, M., Chang, C.H., Chang, B., Dale, J.M., Deng, J.M., Goldsmith, A.D., Lee, J.M., Onodera, C.S., Quach, H.L., Tang, C.C., Toriumi, M., Wu, H.C., Yamamura, Y., Yu, G., Bower, L., Chen, H., Cheuk, R., Jones, T., Karlin-Namann, G., Kim, C., Lam, B., Lin, J., Meyers, M.C., Miranda, M., Nguyen, M., Palm, C.J., Shinn, P., Southwick, A., Davis, R.W., Ecker, J.R. and Theologis, A.
                                                                                                                                                                                                                                                                                                                                                                                                          Submitted (16-APR-2002) Plant Gene Expression Center, 800 Buchanan Street, Albany, CA 94710, USA
The RIKEN Genomic Sciences Center (GSC) members carried out the collection and clustering of RAFL cDNAs (RAFL cDNA: 'RIKEN Arabidopsis Full-Length cDNA'): Seki,M., Narusaka,M., Ishida,J., Satou,M., Kamiya,A., Sakurai,T., Carninci,P., Kawai, J., Hayashizaki,Y. and Shinozaki,K.
                    Annotation is based on the January 2002 version of the Arabidopsis genome submitted to GenBank.
                                                                                        Yamada,K. (SSP/PGEC) and Seki, M. (RIKEN GSC) contributed to this work. Shinozaki,K. (RIKEN GSC) and Theologis,A. (PGEC) contributed equally to this work as PIs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Eukaryota; Viridiplantae; Streptophyta; Embryophyta; Tracheophyta; Spermatophyta; Magnoliophyta; eudicotyledons; core eudicots;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Arabidopsis thaliana
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            FLI CDNA.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC The invention relates to a pure polypeptide comprising a fully defined CC Myb protein transcription factor OBMYBS1, OSMYBS2 or OBMYBS3 protein CC sequence, where the polypeptide regulates expression of a gene in a cell. CC The polypeptide is useful for regulating expression of a gene in a plant cell, preferably rice or barley cell. The method is useful for cell, preferably rice or barley cell. The method is useful for antibody to the polypeptide is useful for detecting the polypeptide. An CC distribution of OSMYBS proteins in tissues and in cellular compartments cc and for verifying the expression of OSMYBS proteins in a transgenic plant. Nucleic acid encoding the polypeptide is useful for generating a cryptessed in a tissue or cell. Nucleic acid encoding the polypeptide is cellular compartment in CC expressed in a tissue or cell. Nucleic acid encoding the polypeptide is cellular compound in a compound consecution of osmyBS many is composed in a condition of cellular compound consecution of a gene regulated by the methods, or as labelled condition of a gene regulated by the polypeptide, e.g. alpha-amylase composed the regulated by the polypeptide, e.g. alpha-amylase componed consecution of a gene regulated by the polypeptide, e.g. alpha-amylase componed consecution of a gene regulated by the polypeptide, e.g. alpha-amylase componed consecution of a gene regulated by the polypeptide, e.g. alpha-amylase componed consecution of a gene regulated by the polypeptide is componed consecution of a gene regulated by the polypeptide is componed consecution of a gene regulated by the polypeptide is componed consecution of a gene regulated by the polypeptide is componed consecution of a gene regulated by the polypeptide is componed consecution of a gene regulated by the polypeptide is componed consecution of a gene regulated by the golypeptide is componed consecution of a gene regulated by the golypeptide is componed consecution of a gene regulated by the golypeptide is componed consecution of a gene regulated by the gol
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel Myb proteins derived from Oryza sativa and designated OsMYBS1, OsMYBS2 or OsMYBS3, useful for regulating expression of a gene in plant cell, preferably rice or barley cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Yu S;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Disclosure; SEQ ID NO

CC Myb protein transcription factor OsMYBS1, OsMYBS2 or OsMYBS3 protein
CC sequence, where the polypeptide regulates expression of a gene in a cell.
CC The polypeptide is useful for regulating expression of a gene in a plant
CC cell, preferably rice or barley cell. The method is useful for
CC identifying a compound that modulates the activity of the polypeptide. An
CC antibody to the polypeptide is useful for detecting the presence and
CC distribution of OsMYBS proteins in tissues and in cellular compartments
CC and for verifying the expression of OsMYBS proteins in a transgenic
CC plant. Nucleic acid encoding the polypeptide is useful for generating a
CC transgenic plant or producing to determine whether an OsMYBS mRNA is
CC expressed in a tissue or cell. Nucleic acid encoding the polypeptide is
CC also useful as primers in PCR-based detection methods, or as labelled
CC probes in nucleic acid blots (e.g. Northern blots). The compound
CC identified by the method is useful for enhancing or repressing the
CC expression of a gene regulated by the polypeptide, e.g. alpha-amylase
CC comyrBS1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Alignment

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       286
```

The invention relates to a transgenic plant having recombinant polynucleotide (II) encoding polypeptide comprising at least 6 consecutive amino acids of a sequence chosen from the protein sequence appearing as ADC46603 - ADC46749 (every second sequence), where recombinant polynucleotide alters a trait of the seed transgenic plant when compared with same trait of another plant lacking recombinant polynucleotide. The proteins are transcription factor-like proteins. Also included are altering (M1) a trait associated with seed (comprising: transforming a plant with (II); selecting the transformed plants; and identifying a transformed plant with seed having altering the proteins are transformed plant (involving transforming the plant with least one gene of a plant (involving transforming the plant with (II) and selecting the transformed plant), altering (M3) a trait associated with a plant's seed (comprising:

The method (M1) is useful for altering a trait associated with seed. The method (M2) is useful for altering the expressing levels of at least one gene of a plant. The method (M3) is useful for altering a trait associated with a plant's seed. The method (M4) is useful for altering a plant's trait. The method (M4) is useful for altering a trait such as seed or plant size, stress tolerance, yield or disease resistance. The present sequence encodes a transcription factor-like protein/seed trait altering protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        transforming the plant with a recombinant polynucleotide comprising a nucleotide sequence comprising least 18 consecutive nucleotides of a sequence appearing as ADC46750 - ADC46766 and selecting the transformed plan) altering (M4) a plant's trait (involving providing a database sequence, comparing the database sequence with a polypeptide or a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Alignment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC The invention relates to a recombinant polynucleotide that alters a CC plant's environmental stress tolerance when compared with the same trait CC of another plant lacking the recombinant polynucleotide. Also included CC are a transgenic plant comprising the novel recombinant polynucleotide CC consecutive amino acids of any of the 55 250-500 residue amino acid CC consecutive amino acids of any of the 55 250-500 residue amino acid CC sequences (S1), given in the specification, altering the environmental CC stress response or tolerance of a plant, or altering a plant's trait and CC altering the expression levels of at least one gene in a plant. The CC regulation of gene expression of plants to modify the plant's traits, in particular with respect to environmental stress responses (e.g. to viral CC infection, fungal infection, microbial infection, herbicide resistance, CC heat, cold, heavy metals, low light, drought, osmotic stress and salt CC concentration). The present sequence is an environmental stress related CC polynucleotide of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polynucleotide sequences are useful in screening for a transcription factor that modifies a plant trait. Also disclosed is an expression vector comprising a TF polynucleotide sequence, a host cell comprising the expression vector, a transgenic plant comprising or ectopically expressing an isolated TF polynucleotide sequence, a method for screening for a molecule that modifies a plant trait, a method for producing a transgenic plant, a method for identifying a sequence homologous to a TF polynucleotide or polypeptide sequence, and a method for screening for a transcription factor that modifies a plant trait. The present sequence encodes a novel A, thaliana TF of the invention. Note: The sequence data for this patent did not form part of the printed specification. The complete sequence data for this patent was obtained in electronic format
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to the isolation of novel pla-
(arabidopsis thaliana) polynucleotide sequences that encode
factors (TFs), and the polypeptide sequences for the TFs. T
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New polynucleotide, useful in modifies a plant trait.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 1432 BP;

Conscillation in transcer to a transperit plant comprises a recombinant comprising a sequence encoding a polymelted that initiates can transcription (i.e. a transcription factor) from Arabidopsis, Soybean, comprising any of the sequence appearing as AD001588 changes or Corn, comprising any of the sequences appearing as AD001588 changes are progeny plant, an expression cassette (comprising a progeny plant, an expression cassette (comprising a polymucleotide described above), a host cell comprising the expression cassette, producing a modified plant having a modified trait, identifying cassette, producing a modified plant having a modified trait, identifying cassette, producing a modified plant having a modified trait, identifying cassette, producing a modified plant having a modified trait, identifying cassette, producing a modified trait as subject to a regulatory effect of any of the polymucleotide sequence that is subject to a regulatory effect of any of the polymucleotide sequence that is subject to a regulatory effect of any of the polymucleotide sequence to the polymucleotide described above. The crait e.g. an enhanced tolerance to abiotic stress increased tolerance to heat, tolerance to phosphate limitation, tolerance to potassium cassettion, permination in cold conditions, freezing tolerance, tolerance to betryits, altered susceptibility to mean litered susceptibility to second a stered branching pattern, reduced conditions, altered stem morphology, increased root stem bifurcations, altered show morphology, increased cold caltered leaf development, altered stem morphology, increased cold caltered leaf development, increased leaf size and mass, glossy leaves, caltered seed shape, change in seed shape, change in second morphology, altered seed coloration,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Zhang J, F;

CC associated with a plant trait as compared to a wild plant. Also included CC are a transgenic plant comprising the polynucleotides, a computer CC readable medium having stored sequence information, and identifying a CC homologue sequence from a database comprising a plurality of known plant CC sequences comprising inputting sequence information selected from one of CC 464 fully defined sequences given in the specification. The isolated or CC recombinant polynucleotide is used for producing a plant having a CC modified trait, the method comprising selecting a polynucleotide that CC encodes a polypeptide or an antisense nucleic acid, inserting the CC polynucleotide or antisense nucleic acid, inserting the CC introducing the vector into a plant or a cell of a plant to overexpress CC the polypeptide or antisense nucleic acid, thereby producing a modified CC plant, and selecting for a modified trait (e.g. increased production of CC environmental stress response (e.g. drought), microbial disease conditions of metabolic chemicals, pest tolerance, resistance, herbicide resistance, seed and fruit yield, growth rate, leaf and flower senescence and many other traits listed in the specification). present sequence is one of the 232 polynucleotides liana transcription factor encoding an

                                                                                               transcription factor polymucleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower senescence. Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.
                                                                                                                                                                                                                                                                                                    New plant transcription factor polynucleotides and polypeptides, useful in producing transgenic plants with commercially valuable properties, such as an alteration in a plant growth characteristic, e.g. growth rate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        09-AUG-2001;
                                                                          Sequence 867
                                                                                                                                                                                                            The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a number of isolated cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polymucleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, e.g. salt stress resistance, osmotic stress resistance, tolerance to freezing, drought, low humidity tolerance, or radiation resistance. Sequence information related to the polymucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention

The method of the CC invention can be used to produced a plant having altered traits such as: CC enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone CC sensitivity; disease resistance; sugar sensing; early or late flowering; CC entered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of trichome; reduced apical dominance, reduced trichome density; lack of trichome; reduced ectopic trichome number; altered stem morphology; cincreased root growth; increased root hairs; altered seed development; correlated increased neotosis; increase in trichome number; altered seed development; correlature sensescence, increased neotosis; increase in seedling or plant correlature sensescence, increased neotosis; increase in seedling or plant size; decreased plant size; leaf morphology; seed morphology; seed sichemistry; increase in root anthocyanins; increase in plant correlated plant, polynucleotides and polypeptides are useful in transgenic plant, polynucleotides and polypeptides are useful in transgenic plant, related polynucleotides and polypeptides are useful in transgenic plant, related polynucleotides. This sequence represents a plant
                                                                                                                                                                                                                                                                                                                                                                     ₹

The isolated or crecombinant polynucleotide is used for producing a plant having a CC modified trait, the method comprising selecting a plant having a CC modified trait, the method comprising selecting a polynucleotide that CC modified trait, the method comprising selecting a polynucleotide that CC polynucleotide or antisense nucleic acid into an expression vector, introducing the vector into a plant or a cell of a plant to overexpress CC the polypeptide or antisense nucleic acid, thereby producing a modified CC plant, and selecting for a modified trait (e.g. increased production of agriculturally useful proteins or metabolic chemicals, pest tolerance, CC environmental stress response (e.g. drought), microbial disease CC resistance, herbicide resistance, seed and fruit yield, growth rate, leaf CC and flower senescence and many other traits listed in the specification). The present sequence is one of the 232 polynucleotides encoding an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              encoding an Arabidopsis thaliana transcription factor, their variants, complements, fragments, or related polynucleotide with 31% to 95% sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered phenotype as compared to a wild-type or reference plant, or the plant exhibits ectopic expression or altered expression of one or more genes associated with a plant trait as compared to a wild plant. ```

The invention relates to a number of isolated Arabidopsis thaliana cDNA sequences and their encoded proteins which are especially transcription factor related cDNA's and proteins. The isolated or recombinant plant transcription factor polynucleotides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant,

Sequence information related to the polynucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the cDNAs of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                              291
```

The invention describes a transgenic plant comprising a recombinant CC polynucleotide of any one of more than 500 nucleotide sequences fully CC defined in the specification or its complement. The method of the CC invention can be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone CC enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone CC enhanced troity; disease resistance; sugar sensing; early or late flowering; CC altered flower structure, change in stem bifurcations, altered branching CC pattern, reduced apical dominance, reduced trichome density; lack of CC trichomes; reduced ectopic trichome development; altered trichome CC development; increase in trichome number; altered seed development; CC increased root growth; increased root hairs; altered seed development; CC altered cell proliferation or cell differentiation; rapid development; CC premature sensescence; increased neorphology; seed morphology; seed correased plant size; leaf morphology; seed morphology; seed correased plant size; leaf morphology; seed morphology; seed correase in plant cc anthocyanins, or alteration in light response or shade avoidance. The corresponse or shade avoidance corresponse or shade avoidance. The corresponse or shade avoidance.
